

## Dr Egbert Schark

Partner

Dr Egbert Schark is a Founding Partner of d-fine, one of the leading financial services consulting firms in Europe focusing on quantitative and system integration projects. Previously he was a partner at Arthur Andersen and worked in the “Financial and Commodity Risk Consulting (FCRC)” group in Germany. He was responsible for building the group from a few specialists to a unit of nearly 100 consultants offering services in quantitative and IT projects to financial services sector clients. This group has since become the independent consulting firm d-fine.

He managed many projects in market- and credit risk, from conceptual design to implementation of trading and risk management systems, as well as Basel II compliance issues including the development of internal rating models. Another key area of his expertise lays in the development of treasury systems at large industrial corporations.

Dr Schark has published many articles, especially on Basel II. He has been frequently invited to panel discussions on subjects ranging from technical issues and consulting matters, to general topics in the financial world.

In addition, he voluntarily set up and led a user group of a well-known treasury system, representing the interests of over 2000 users in Germany, Austria and Denmark.

Dr Schark gained his PhD at CERN/Geneva and at Mainz University in the area of atomic physics, and is the author of numerous scientific papers in this field. His professional career in the industry began as the Head of “Trading systems” at the Landesbank Rheinland-Pfalz.
